

# ***CENTRAL ISLAND FOREST OPERATION FOREST STEWARDSHIP PLAN***

**2017-2024**

Western Forest Products Inc.

## PREAMBLE

This Forest Stewardship Plan (FSP) extension encompasses lands within the traditional territories of the 'Namgis, Kwakiutl, Ka:'yu:k't'h/Che:k'tles7et'h', Mowachaht/Muchalaht, We Wai Kai, Tlowistis, Wei Wai Kum, and Quatsino First Nations. The FSP holder will share information and work collaboratively with the respective Nations in their territories.

This Forest Stewardship Plan (FSP) extension includes a portion of the Central Island Forest Operation Stewardship Plan, comprising the geographic areas included in TFL 37 and a timber license in the Tahsish watershed located on Vancouver Island, in the vicinity of Beaver Cove and Woss. This FSP extension applies to the tenures identified in Section 3.0 of the FSP.

FSPs are a key operational plan under the *Forest and Range Practices Act* (FRPA). FSPs identify broad areas called Forest Development Units (FDUs) where timber harvesting and road construction may occur, are subject to public review and comment, and must be approved by government before taking effect. FSPs do not show cutblocks and roads for approval, and are generally in effect for a 5 year term, unless extended. This extension will extend the FSP until it is replaced by a Forest Landscape Plan, which is under development

For each of the FRPA values and their Objectives set by government, such as wildlife and biodiversity, the FSP identifies legally binding results and strategies, measures and standards which will be required to be implemented by each holder of the FSP in the FDU. Results and strategies are consistent, to the extent practicable, with government Objectives set out in land use plans, such as the Vancouver Island Land Use Plan, and sub-unit plans such as approved landscape unit plans.

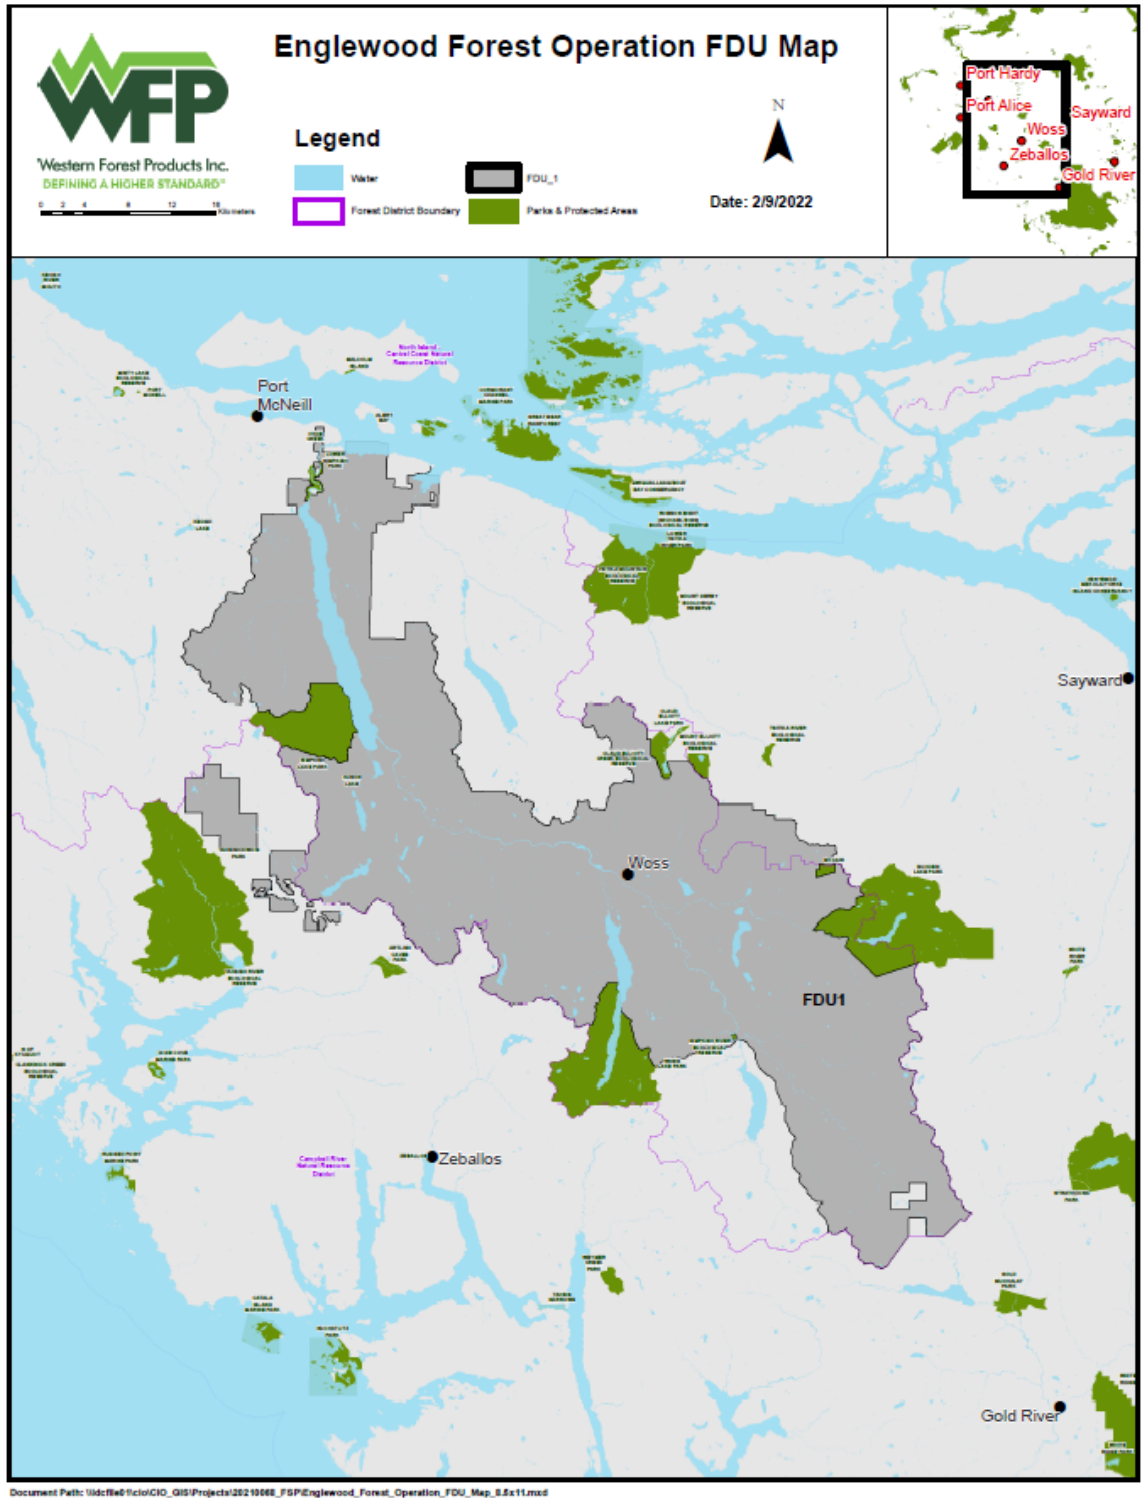

The WFP Central Island Forest Operation Forest Stewardship Plan, Englewood Extension with maps and appendices can be found at <http://www.westernforest.com/sustainability/>

More information on FSPs is available at:  
<https://www2.gov.bc.ca/gov/content/industry/forestry/managing-our-forest-resources/forest-stewardship-plans>.

## **1.0 Date of Submission**

Original: May 5, 2017  
Extension: March 17, 2022

## **2.0 Interpretation**

In this Forest Stewardship Plan (FSP):

Holder of the FSP has the same meaning as in the Forest and Range Practices Act.

Licensee refers to licensees or agreement holders under the Forest Act, that are one of the holders of the FSP as described in FRPA s.3.

Results or Strategies in this FSP are proposed pursuant to Forest and Range Practices Act (FRPA) Section 5. Results or Strategies and Undertakings in this FSP refer to the Forest and Range Practices Act, Forest Planning and Practices Regulation (FPPR), and/or Government Actions Regulation (GAR) as they were on the date the FSP was submitted for approval; results and strategies apply within the specified FDUs, during the term of the plan, for the primary forest activity by the licensees holding the FSP, subject to any qualifications or limitations in the Results or Strategies.

The word “section” or “subsection” or the abbreviations “s.” or “ss.” is used to indicate a numbered section or sections of the indicated Act, Regulation, or Order. FSP sections may also be referred to with “s.” in reference to numbered subsections in the Tables.

Results and strategies apply in FDU 1.

Sections of Orders, Notices, and Objectives are quoted in *italics* in this FSP for convenience only; if there is a discrepancy between the FSP text and a quoted section, the text in the Act, Regulation, Order, or Notice prevails, and should be used in preference to the FSP text.

The term “Enactment” in this FSP, has the same meaning as it has in the Forest and Range Practices Act.

The abbreviation “R/S” in this FSP means “result or strategy”.

Background Information where contained in this FSP, is not part of the FSP or the FSP results and strategies.

“Legislated Planning Date” means:

- (i) subject to clause (ii), the date 4 months before the Date of Submission; or
- (ii) if an enactment or an objective set by government requires that a date different than the date referred to in clause (i) be applied in respect of this FSP, then that different date.

## **3.0 Application of This FSP**

### **3.1 Licensee(s) and Licence(s) (FRPA Act s.3(4))**

This FSP applies to each cutting permit and road permit issued or granted to the licensees holding this FSP:

- (a) after the FSP term commences;
- (b) within FDUs; and
- (c) under or in respect of the following licences:

Licensee	Licences
<b>Englewood Operations</b>	
Western Forest Products Inc.	Tree Farm Licence 37 (includes TLs within the TFL); T0716; FL A19231
Atli Resources Limited Partnership	FL A84672, Amendment 5, April 24, 2009; FL A92625
Atli Resources Corporation	FL A92106, FL A98168
Canfor	A19233 and blocks within TFL 37

and, for greater certainty, applies to the obligations of the licensee in respect of these permits under section 29(1) of the Act regarding the establishment of free growing stands, unless, and to the extent, the licensee gives a written notice to the Ministry of Forests and Range to add or remove a licence from this FSP.

### **3.2 Application of This FSP to FPC Obligations (FRPA Act ss.197 (4) (5) and (7) and FPPR s.14(1)(d) and (e))**

This FSP applies to the following areas:

- (a) all cutblocks and roads subject to cutting permits issued to the licensee under the licences referred to in Paragraph 3.1 on or after the date approval of this FSP;
- (b) a cutblock or road permit subject to a cutting permit issued to the licensee under a licence referred to in Paragraph 3.1 before the FSP term commences, whether the cutting permit is still in effect or not, for which the licensee gives written notice to the Ministry of Forests, Range, and Natural Resources Operations after the FSP term commences, effective the date, and to the extent, specified in the notice;
- (c) a road, or portion thereof, subject to a road permit in effect before the FSP term commences for which the licensee gives written notice to the Ministry of Forests, Range, and Natural Resources Operations after the FSP term commences, effective the date, and to the extent, specified in the written notice; and
- (d) a Cutblock:
  - (i) that is within FDU 1;
  - (ii) for licensee cutblocks where stocking standards or other site level requirements that may apply set out in the Forest Practices Code, Code Regulations, Forest Development Plan, previously approved FSPs for the same area, or in a pre-FRPA prescription would otherwise apply (including a site plan, silviculture prescription or pre-harvest silviculture prescription); and
  - (iii) for which:
    - the commencement date occurred; and
    - a free growing declaration was not received by the Ministry of Forests, Range, and Natural Resources Operations within RESULTS before the FSP term commenced; and
  - (iv) the Licensee may elect to, for the purposes of otherwise specifying stocking standards, and changes to the total area under prescription including wildlife tree patches, under FRPA s. 197(4, 5 or 7) within an FDU as specified by FPPR s. 14(1)(d or e) and where it is ecologically appropriate to have stocking standards approved under this plan apply to standards units within such cutblocks from previous plans. For each standards unit, this election is to be made prior to the declaration of free growing date by

electronically providing notice using the Ministry's RESULTS system to indicate the replacement FSP stocking standard and/or modified wildlife tree patch area.

#### **4.0 Term of This FSP (FRPA ss.6(1)(a) and (b))**

The term of this FSP extension is 2 years less a day.

The FSP may be terminated earlier if the licensee elects to replace it with another approved FSP; or may be extended pursuant to the Act and regulations.

The term of this FSP extension commences on the date the FSP extension is approved by the DDM.

#### **5.0 FSP Map and Forest Development Units (FDUs) (FRPA Act s.5(1)(a), FPPR s.14)**

##### **5.1 Boundaries of FDU**

The boundaries of the FDUs under this FSP are shown on the FSP map. The FDU boundaries include, despite any inconsistency between the FSP Map and the boundaries of a tree farm licence or timber licence referred to in Paragraph 3.1, the full area of such licence, except any area shown on the map as excluded.

The following FDUs are intended to follow Landscape Unit boundaries and/or Tenure boundaries: FDU #1.

##### **5.2 New Forest Development Units (FRPA s.5(1)(a) and FPPR s.14(1)(a))**

The FSP map shows the boundaries of all new FDUs.

##### **5.3 Forest Development Units in Effect on Date of Submission of This FSP (FRPA ss.7(1.1) and (2) and 5(1)(a) and FPPR s.14(1)(b))**

The FSP map shows the FDU that is in effect at the time of its submission for approval.

##### **5.4 Areas to Which s.196(1) of the Act Apply (FRPA s.196(1); FPPR s.14(1)(c))**

Not applicable.

##### **5.5 Designations in Effect Four Months Before Submission of This FSP (FPPR s.14(2))**

The FSP map shows the designations and other areas listed in FPPRs.14(2) that were in effect 4 months before the FSP was submitted for approval.

##### **5.6 Areas within FDUs considered to be approved (FRPA ss.196(1) and (2) and FPPR ss.14(1)(c) and 110)**

Not applicable.

##### **5.7 Areas within FDU Subject to Cutting Permit or Road Permit (FPPR s.14(3))**

The FSP map shows the areas within the FDUs that are subject to a cutting permit or road permit: a) held by the licensee, and b) in effect 4 months before the submission of the FSP for approval. (note: can include any CPs/RPs in effect up to submission date).

Blanket CPs issued for the purposes of salvage are listed below:

Tenure	CP
TFL37	CP94, CP96, and CP97

## 5.8 Declared Areas (FPPR s.14(4))

The FSP map shows the areas within the FDUs, if any, that are declared areas under FPPR s.14(4). Declarations made after FSP approval will be made through the FSP tracking system.

## 6.0 FRPA Values and Results or Strategies

### FRPA

s.5 (1) A forest stewardship plan must

(a)...

(b) specify intended results or strategies, each in relation to

(i) objectives set by government, and

(ii) other objectives that are established under this Act or the regulations and that pertain to all or part of the area subject to the plan, and

(c) conform to prescribed requirements.

(1.1) The results and strategies referred to in subsection (1) (b) must be consistent to the prescribed extent with objectives set by government and with the other objectives referred to in section 5 (1) (b).

Results and Strategies or Undertakings to Comply in this section are proposed in accordance with the qualifications and limitations described in Section 2.0 Interpretation, of this FSP, and in accordance the Forest and Range Practices Act (FRPA) and Forest Planning and Practices Regulation (FPPR), as they were on the date of FSP submission.

## 6.1 FRPA Value: Soil

FPPR Section 5 The objective set by government for soils is, without unduly reducing the supply of timber from British Columbia's forests, to conserve the productivity and the hydrologic function of soils.

Table 1.1: Soils	
Objective	<p>FPPR s.5.</p> <p>The FPPR Practice is repeated here for convenience, but if differences exist between the text of the FPPR and the text herein, the text of the FPPR as it was at time of FSP submission prevails:</p> <p><i>Soil disturbance limits</i></p> <p>35 (1)</p> <p><i>In this section:</i></p> <p>"roadside work area" means the area adjacent to a road where one or both of the following are carried out:</p> <p>(a) decking, processing or loading timber;</p> <p>(b) piling or disposing of logging debris;</p>

	<p><i>"sensitive soils" means soils that, because of their slope gradient, texture class, moisture regime, or organic matter content have the following risk of displacement, surface erosion or compaction:</i></p> <ul style="list-style-type: none"> <li><i>(a) for the Interior, a very high hazard;</i></li> <li><i>(b) for the Coast, a high or very high hazard.</i></li> </ul> <p><i>(2) Repealed [B.C. Reg. 580/04]</i></p> <p><i>(3) An agreement holder other than a holder of a minor tenure who is carrying out timber harvesting must not cause the amount of soil disturbance on the net area to be reforested to exceed the following limits:</i></p> <ul style="list-style-type: none"> <li><i>(a) if the standards unit is predominantly comprised of sensitive soils, 5% of the area covered by the standards unit, excluding any area covered by a roadside work area;</i></li> <li><i>(b) if the standards unit not is not predominantly comprised of sensitive soils, 10% of the area covered by the standards unit, excluding any area covered by a roadside work area;</i></li> <li><i>(c) 25% of the area covered by a roadside work area.</i></li> </ul> <p><i>(4) An agreement holder may cause soil disturbance that exceeds the limits specified in subsection (3) if the holder</i></p> <ul style="list-style-type: none"> <li><i>(a) is removing infected stumps or salvaging windthrow and the additional disturbance is the minimum necessary, or</i></li> <li><i>(b) is constructing a temporary access structure and both of the following apply:</i> <ul style="list-style-type: none"> <li><i>(i) the limit set out in subsection (3) (a) or (b), as applicable, is not exceeded by more than 5% of the area covered by the standards unit, excluding the area covered by a roadside work area;</i></li> <li><i>(ii) before the regeneration date, a sufficient amount of the area within the standards unit is rehabilitated such that the agreement holder is in compliance with the limits set out in subsection (3).</i></li> </ul> </li> </ul> <p><i>(5) The minister may require an agreement holder to rehabilitate an area of compacted soil if all of the following apply:</i></p> <ul style="list-style-type: none"> <li><i>(a) the area of compacted soil</i> <ul style="list-style-type: none"> <li><i>(i) was created by activities of the holder,</i></li> <li><i>(ii) is within the net area to be reforested, and</i></li> <li><i>(iii) is a minimum of 1 ha in size;</i></li> </ul> </li> <li><i>(b) the holder has not exceeded the limits described in subsection (3);</i></li> <li><i>(c) rehabilitation would, in the opinion of the minister,</i> <ul style="list-style-type: none"> <li><i>(i) materially improve the productivity and the hydrologic function of the soil within the area, and</i></li> <li><i>(ii) not create an unacceptable risk of further damage or harm to, or impairment of, forest resource values related to one or more of the subjects listed in section 149 (1) of the Act.</i></li> </ul> </li> </ul> <p><i>(6) An agreement holder who rehabilitates an area under subsection (4) or (5) must</i></p> <ul style="list-style-type: none"> <li><i>(a) remove or redistribute woody materials that are exposed on the surface of the area and are concentrating subsurface moisture, to the extent necessary to limit the concentration of subsurface moisture on the area,</i></li> </ul>
--	--

	<p>(b) de-compact compacted soils, and (c) return displaced surface soils, retrievable side-cast and berm materials.</p> <p>(7) If an agreement holder rehabilitates an area under subsection (4) or (5) and erosion of exposed soil from the area would cause sediment to enter a stream, wetland or lake, or a material adverse effect in relation to one or more of the subjects listed in section 149 (1) of the Act, the agreement holder, unless placing debris or revegetation would not materially reduce the likelihood of erosion, must</p> <p>(a) place woody debris on the exposed soils, or (b) revegetate the exposed mineral soils.</p> <p><i>Permanent access structure limits</i> 36 (1) An agreement holder must ensure that the area in a cutblock that is occupied by permanent access structures built by the holder or used by the holder does not exceed 7% of the cutblock, unless</p> <p>(a) there is no other practicable option on that cutblock, having regard to</p> <p>(i) the size, topography and engineering constraints of the cutblock, (ii) in the case of a road, the safety of road users, or (iii) the requirement in selection harvesting systems for excavated or bladed trails or other logging trails, or (b) additional permanent access structures are necessary to provide access beyond the cutblock.</p> <p>(2) If an agreement holder exceeds the limit for permanent access structures described in subsection (1) for either of the reasons set out in that subsection, the holder must ensure that the limit is exceeded as little as practicable.</p> <p>(3) An agreement holder may rehabilitate an area occupied by permanent access structures in accordance with the results or strategies specified in the forest stewardship plan or by</p> <p>(a) removing or redistributing woody materials that are exposed on the surface of the area and are concentrating subsurface moisture, as necessary to limit the concentration of subsurface moisture on the area, (b) de-compacting compacted soils, and (c) returning displaced surface soils, retrievable side-cast and berm materials.</p> <p>(4) If an agreement holder rehabilitates an area under subsection (3) (a) and erosion of exposed soil from the area would cause sediment to enter a stream, wetland or lake, or a material adverse effect in relation to one or more of the subjects listed in section 149 (1) of the Act, the agreement holder, unless placing debris or revegetation would not materially reduce the likelihood of erosion, must</p> <p>(a) place woody debris on the exposed soils, or (b) revegetate the exposed mineral soils.</p>
Undertaking	<p>Undertaking to Comply:</p> <p>1) The holder of the FSP undertakes to comply with section 36 of the FPPR, as it was at the time of submission. The licensee is exempt from the</p>

	requirement to specify Results or Strategies for FPPR section 36 on the basis of the undertaking.
Results or Strategies pursuant to FRPA s.5	<p>Result or Strategy:</p> <p>1) In accordance with FPPR s.12.2(1)<sup>1</sup>, the Holder of the FSP adopts FPPR s.35, as it was at the time of submission, as a result or strategy.</p> <p><u>2) Definitions for purposes of this result:</u></p> <p>Standards units for the purposes of FPPR s.1, ss.35(3)(a) and (b), and s.35(4), means:</p> <p>a) standards units defined based on homogeneous soil disturbance limits including groups of standard units within a cutblock with the same soil disturbance limit, or</p> <p>b) groups of standard units or the entire cutblock, if the most restrictive soil disturbance limit for the standards units or cutblock is applied.</p>
Apply to these Forest Development Units:	<input checked="" type="checkbox"/> FDU 1

## 6.2 FRPA Value: Timber

*FPPR Section 6. The objectives set by government for timber are to:*

- (a) maintain or enhance an economically valuable supply of commercial timber from British Columbia's forests,*
- (b) ensure that delivered wood costs, generally, after taking into account the effect on them of the relevant provisions of this regulation and of the Act, are competitive in relation to equivalent costs in relation to regulated primary forest activities in other jurisdictions, and*
- (c) ensure that the provisions of this regulation and of the Act that pertain to primary forest activities do not unduly constrain the ability of a holder of an agreement under the Forest Act to exercise the holder's rights under the agreement.*

**Table 2.1: Objective Set by Government for Timber**

Objective	FPPR s.6
Results or strategies pursuant to FRPA s.5	<p><u>Exemption:</u></p> <p>Results or strategies are not specified in this FSP under the FPPR 6 Objective, per the FPPR s.12(8) exemption for results or strategies for Timber, except as provided for the VILUP Land-Use Objectives 7 and 8.</p>

## 6.3 FRPA Value: Water, fish, wildlife and biodiversity within riparian areas

*FPPR Section 8 The objective set by government for water, fish, wildlife and biodiversity within riparian areas is, without unduly reducing the supply of timber from British Columbia's forests, to conserve, at the landscape level, the water quality, fish habitat, wildlife habitat and biodiversity associated with those riparian areas.*

<sup>1</sup> FPPR s.12.2 (1) A person required to prepare a forest stewardship plan is exempt from section 35 if the person (a) prepares and submits to the minister the proposed plan, including an intended result or strategy for the objective for soils that is set out in section 5, in relation to the areas of primary forest activity under the plan, and (b) receives the minister's approval to the plan.

**Table 3.1: Water, fish, wildlife and biodiversity within riparian areas**

Objective

FPPR Section 8

*The objective set by government for water, fish, wildlife and biodiversity within riparian areas is, without unduly reducing the supply of timber from British Columbia's forests, to conserve, at the landscape level, the water quality, fish habitat, wildlife habitat and biodiversity associated with those riparian areas.*

*FPPR Part 4: Division 3 – Riparian Areas*

*Stream riparian classes*

47. (1) *In this section, “active flood plain” means the level area with alluvial soils, adjacent to streams, that is flooded by stream water on a periodic basis and is at the same elevation as areas showing evidence of*

*(a) flood channels free of terrestrial vegetation,*

*(b) rafted debris or fluvial sediments, recently deposited on the surface of the forest floor or suspended on trees or vegetation, or*

*(c) recent scarring of trees by material moved by flood waters.*

(2) *A stream that is a fish stream or is located in a community watershed has the following riparian class:*

*(a) S1-A, if the stream averages, over a 1 km length, either a stream width or an active flood plain width of 100 m or greater;*

*(b) S1-B, if the stream width is greater than 20 m but the stream does not have a riparian class of S1-A;*

*(c) S2, if the stream width is not less than 5 m but not more than 20 m;*

*(d) S3, if the stream width is not less than 1.5 m but is less than 5 m;*

*(e) S4, if the stream width is less than 1.5 m.*

(3) *A stream that is not a fish stream and is located outside of a community watershed has the following riparian class:*

*(a) S5, if the stream width is greater than 3 m;*

*(b) S6, if the stream width is 3 m or less.*

(4) *Subject to subsections (5) or (6), for each riparian class of stream, the minimum riparian management area width, riparian reserve zone width and riparian management zone width, on each side of the stream, are as follows:*

<i>Riparian Class</i>	<i>Riparian Management Area (metres)</i>	<i>Riparian Reserve Zone (metres)</i>	<i>Riparian Management Zone (metres)</i>
<i>S1-A</i>	<i>100</i>	<i>0</i>	<i>100</i>
<i>S1-B</i>	<i>70</i>	<i>50</i>	<i>20</i>
<i>S2</i>	<i>50</i>	<i>30</i>	<i>20</i>
<i>S3</i>	<i>40</i>	<i>20</i>	<i>20</i>
<i>S4</i>	<i>30</i>	<i>0</i>	<i>30</i>
<i>S5</i>	<i>30</i>	<i>0</i>	<i>30</i>
<i>S6</i>	<i>20</i>	<i>0</i>	<i>20</i>

(5) *If the width of the active flood plain of a stream exceeds the specified width for the riparian management zone, the width of the riparian management zone extends to the outer edge of the active flood plain.*

(6) *The minister may specify a riparian reserve zone for a stream with a riparian class of S1-A if the minister considers that a riparian reserve zone is required.*

(7) *The riparian reserve zone for a stream begins at the edge of the stream channel bank and extends to the width described in subsection (4) or (6).*

- (8) *The riparian management zone for a stream begins at*  
 (a) *the outer edge of the riparian reserve zone, or*  
 (b) *if there is no riparian reserve zone, the edge of the stream channel bank, and extends to the width described in subsection (4) or (5).*

*Wetland riparian classes*

48. (1) *Wetlands have the following riparian classes:*

- (a) *W1, if the wetland is greater than 5 ha in size;*  
 (b) *W2, if the wetland is not less than 1 ha and not more than 5 ha in size and is in one of the following biogeoclimatic zones or subzones:*  
     (i) *Ponderosa Pine;*  
     (ii) *Bunch Grass;*  
     (iii) *Interior Douglas-fir, very dry hot, very dry warm or very dry mild;*  
     (iv) *Coastal Douglas-fir;*  
     (v) *Coastal Western Hemlock, very dry maritime, dry maritime or dry sub-maritime;*  
 (c) *W3, if the wetland is not less than 1 ha and not more than 5 ha in size and is in a biogeoclimatic zone or subzone other than one referred to in paragraph (b);*  
 (d) *W4, if the wetland is*  
     (i) *not less than 0.25 ha and less than 1 ha in size and is in a biogeoclimatic zone or subzone referred to in paragraph (b) (i), (ii) or (iii), or*  
     (ii) *not less than 0.5 ha and less than 1 ha in size and is in a biogeoclimatic zone or subzone referred to in paragraph (b) (iv) or (v).*

(2) *Despite subsection (1), an area is to be treated as a single wetland with a riparian class of W5 if*

- (a) *the area contains*  
     (i) *two or more W1 wetlands located within 100 m of each other,*  
     (ii) *a W1 wetland and one or more non-W1 wetlands, all of which are within 80 m of each other, or*  
     (iii) *two or more non-W1 wetlands located within 60 m of each other, and*  
 (b) *the combined size of the wetlands, excluding the upland areas, is 5 ha or larger.*

(3) *Subject to subsections (4) and (5), for each riparian class of wetland, the minimum riparian management area width, riparian reserve zone width and riparian management zone width for the wetland are as follows:*

<i>Riparian Class</i>	<i>Riparian Management Area (metres)</i>	<i>Riparian Reserve Zone (metres)</i>	<i>Riparian Management Zone (metres)</i>
<i>W1</i>	<i>50</i>	<i>10</i>	<i>40</i>
<i>W2</i>	<i>30</i>	<i>10</i>	<i>20</i>
<i>W3</i>	<i>30</i>	<i>0</i>	<i>30</i>
<i>W4</i>	<i>30</i>	<i>0</i>	<i>30</i>
<i>W5</i>	<i>50</i>	<i>10</i>	<i>40</i>

(4) *No riparian reserve zone or riparian management zone extends onto any enclosed upland areas in a W1 wetland if the wetland is*

- (a) *located in a boreal, subboreal or hyper-maritime climate, and*  
 (b) *greater than 1 000 ha in size.*

(5) If the minister considers it necessary for a riparian reserve zone or riparian management zone to extend onto an enclosed upland area, the minister may require either or both of the following:

- (a) a riparian reserve zone of a width of 10 m or less;
- (b) a riparian management zone of a width of 40 m or less.

(6) The riparian reserve zone for a wetland begins at the edge of the wetland and extends to the width described in subsection (3) or (5).

(7) The riparian management zone for a wetland begins at

- (a) the outer edge of the riparian reserve zone, or
- (b) if there is no riparian reserve zone, the edge of the wetland,

and extends to the width described in subsection (3) or (5).

#### Lake riparian classes

49. (1) Lakes have the following riparian classes:

- (a) L1-A, if the lake is 1 000 ha or greater in size;
  - (b) L1-B, if
    - (i) the lake is greater than 5 ha but less than 1 000 ha in size, or
    - (ii) the minister designates the lake as L1-B;
  - (c) L2, if the lake is not less than 1 ha and not more than 5 ha in size and is located in a biogeoclimatic zones or subzone that is
    - (i) Ponderosa Pine,
    - (ii) Bunch Grass,
    - (iii) Interior Douglas-fir, very dry hot, very dry warm or very dry mild,
    - (iv) Coastal Douglas-fir, or
    - (v) Coastal Western Hemlock, very dry maritime, dry maritime or dry subarctic;
  - (d) L3, if the lake is not less than 1 ha and not more than 5 ha in size and is in a biogeoclimatic zone or subzone other than one referred to in paragraph (c);
  - (e) L4, if the lake is
    - (i) not less than 0.25 ha and not more than 1 ha in size and is in a biogeoclimatic zone or subzone referred to in paragraph (c) (i), (ii) or (iii), or
    - (ii) not less than 0.5 ha and not more than 1 ha in size and is in a biogeoclimatic zone or subzone referred to in paragraph (c) (iv) or (v).
- (2) Subject to subsection (3), for each riparian class of lake, the minimum riparian management area width, riparian reserve zone width and riparian management zone width are as follows:

Riparian Class	Riparian Management Area (metres)	Riparian Reserve Zone (metres)	Riparian Management Zone (metres)
L1-A	0	0	0
L1-B	10	10	0
L2	30	10	20
L3	30	0	30
L4	30	0	30

(3) If the minister considers it necessary, the minister may specify a riparian management area and a riparian reserve zone for a lake with a riparian class of L1-A.

(4) The riparian reserve zone for a lake begins at the edge of the lake and extends to the width described in subsection (2) or (3).

(5) The riparian management zone for a lake begins at

	<p>(a) the outer edge of the riparian reserve zone, or  (b) if there is no riparian reserve zone, the edge of the lake, and extends to the width described in subsection (2) or (3).</p> <p><i>Restrictions in a riparian management area</i></p> <p>50. (1) A person must not construct a road in a riparian management area, unless one of the following applies:</p> <p>(a) locating the road outside the riparian management area would create a higher risk of sediment delivery to the stream, wetland or lake to which the riparian management area applies;</p> <p>(b) there is no other practicable option for locating the road;</p> <p>(c) the road is required as part of a stream crossing.</p> <p>(2) If a road is constructed within a riparian management area, a person must not carry out road maintenance activities beyond the clearing width of the road, except as necessary to maintain a stream crossing.</p> <p>(3) A person who is authorized in respect of a road must not remove gravel or other fill from within a riparian management area in the process of constructing, maintaining or deactivating a road, unless</p> <p>(a) the gravel or fill is within a road prism,</p> <p>(b) the gravel or fill is at a stream crossing, or</p> <p>(c) there is no other practicable option.</p> <p>51. (1) An agreement holder must not cut, modify or remove trees in a riparian reserve zone, except for the following purposes:</p> <p>(a) felling or modifying a tree that is a safety hazard, if there is no other practicable option for addressing the safety hazard;</p> <p>(b) topping or pruning a tree that is not wind firm;</p> <p>(c) constructing a stream crossing;</p> <p>(d) creating a corridor for full suspension yarding;</p> <p>(e) creating guyline tiebacks;</p> <p>(f) carrying out a sanitation treatment;</p> <p>(g) felling or modifying a tree that has been windthrown or has been damaged by fire, insects, disease or other causes, if the felling or modifying will not have a material adverse impact on the riparian reserve zone;</p> <p>(h) felling or modifying a tree under an occupant licence to cut, master licence to cut or free use permit issued in respect of an area that is subject to a licence, permit, or other form of tenure issued under the Land Act, Coal Act, Geothermal Resources Act, Mines Act, Mineral Tenure Act, Mining Right of Way Act, Ministry of Lands, Parks and Housing Act or Petroleum and Natural Gas Act, if the felling or modification is for a purpose expressly authorized under that licence, permit or tenure;</p> <p>(i) felling or modifying a tree for the purpose of establishing or maintaining an interpretative forest site, recreation site, recreation facility or recreation trail.</p> <p>(2) An agreement holder who fells, tops, prunes or modifies a tree under subsection (1) may remove the tree only if the removal will not have a material adverse effect on the riparian reserve zone.</p> <p>(3) An agreement holder must not carry out the following silviculture treatments in a riparian reserve zone:</p> <p>(a) grazing or broadcast herbicide applications for the purpose of brushing;</p> <p>(b) mechanized site preparation or broadcast burning for the purpose of site preparation;</p> <p>(c) spacing or thinning.</p>
--	--

	<p><i>Restrictions in a riparian management zone</i></p> <p>52. (1) A holder of a minor tenure who fells trees in a cutblock within a riparian management zone of a class described in Column 1 must ensure that</p> <p>(a) the percentage of the total basal area within the riparian management zone specified in Column 2 is left as standing trees, and</p> <p>(b) the standing trees are reasonably representative of the physical structure of the riparian management zone, as it was before harvesting:</p> <p>Column 1 Riparian Class Column 2 Basal Area to be Retained Within Riparian Management Zone (%)</p> <p>S1-A or S1-B stream greater than or equal to 20 S2 stream greater than or equal to 20 S3 stream greater than or equal to 20 S4 stream greater than or equal to 10 S5 stream greater than or equal to 10 S6 stream Not applicable All classes of wetlands or lakes greater than or equal to 10</p> <p>(2) An authorized person who cuts, modifies or removes trees in a riparian management zone for an S4, S5 or S6 stream that has trees that contribute significantly to the maintenance of stream bank or channel stability must retain enough trees adjacent to the stream to maintain the stream bank or channel stability, if the stream</p> <p>(a) is a direct tributary to an S1, S2 or S3 stream,</p> <p>(b) flows directly into the ocean, at a point near to or where one or more of the following is located:</p> <p>(i) a herring spawning area;</p> <p>(ii) a shellfish bed;</p> <p>(iii) a saltwater marsh area;</p> <p>(iv) an aquaculture site;</p> <p>(v) a juvenile salmonid rearing area or an adult salmon holding area, or</p> <p>(c) flows directly into the ocean at a point near to the location of an area referred to in paragraph (b) and failure to maintain stream bank or channel stability will have a material adverse impact on that area.</p> <p><i>Temperature sensitive streams</i></p> <p>53. An authorized person who fells, modifies or removes trees in a riparian management area adjacent to a temperature sensitive stream, or a stream that is a direct tributary to a temperature sensitive stream, must retain either or both of the following in an amount sufficient to prevent the temperature of the temperature sensitive stream from increasing to an extent that would have a material adverse impact on fish:</p> <p>(a) streamside trees whose crowns provide shade to the stream;</p> <p>(b) understory vegetation that provides shade to the stream.</p> <p><i>Fan destabilization</i></p> <p>54. An authorized person who carries out a primary forest activity on the Coast must ensure that the primary forest activity does not cause fan destabilization that has a material adverse effect in relation to one or more of the subjects listed in section 149 (1) of the Act.</p>
Results or Strategies pursuant to FRPA s.5	<p><u>Exemption from Result or Strategy – Objective set by government for water, fish, wildlife and biodiversity within riparian areas (FPPR ss.8)</u></p> <p>1. For the purposes of FPPR s.12.1(2), each Holder undertakes to comply with FPPR ss.47 to 51, 52(2) and 53, and is exempt from specifying an intended Result or Strategy.</p>

**Table 3.4: Retention of trees in a riparian management zone**

Objective	FPPR Section 8 and Section 12(3)
FPPR Practices	<p>The Practice is repeated here for convenience, but if differences exist between the text of the FPPR and the text herein, the text of the FPPR as it was at time of FSP submission prevails:</p> <p>FPPR Section 12(3)-- <i>a person who prepares a forest stewardship plan must specify in it, for the objective set out in section 8, a result or strategy that addresses retention of trees in a riparian management zone.</i></p> <p><i>FPPR s.52(2) An authorized person who cuts, modifies or removes trees in a riparian management zone for an S4, S5 or S6 stream that has trees that contribute significantly to the maintenance of stream bank or channel stability must retain enough trees adjacent to the stream to maintain the stream bank or channel stability, if the stream</i></p> <p><i>(a) is a direct tributary to an S1, S2 or S3 stream,</i></p> <p><i>(b) flows directly into the ocean, at a point near to or where one or more of the following is located:</i></p> <p><i>(i) a herring spawning area;</i></p> <p><i>(ii) a shellfish bed;</i></p> <p><i>(iii) a saltwater marsh area;</i></p> <p><i>(iv) an aquaculture site;</i></p> <p><i>(v) a juvenile salmonid rearing area or an adult salmon holding area, or</i></p> <p><i>(c) flows directly into the ocean at a point near to the location of an area referred to in paragraph (b) and failure to maintain stream bank or channel stability will have a material adverse impact on that area.</i></p>
Results or Strategies pursuant to FRPA s.5	<p><u>Result or Strategy – FPPR s.12(3)</u></p> <p>1. For the purposes of FPPR 12(3), as a Result or Strategy, to address the retention of trees in a riparian management zone, each Holder will:</p> <p>a. Ensure that prior to harvesting, retention levels within RMZs are determined by a qualified professional through a riparian assessment that considers:</p> <p>i. All the factors listed in Schedule 1, s.2 of the FPPR; and</p> <p>ii. Potential site-specific safety and operational issues;</p> <p>b. Design cutblocks and roads in a manner that is consistent with the retention levels as determined by the qualified professional as described in section 1.a; and</p> <p>c. Plan and conduct primary forest activities consistent with the assessment and design in this Result or Strategy.</p>

## 6.4 FRPA Value: Fish habitat in fisheries sensitive watersheds

*FPPR 8.1 Until December 31, 2005 the objective set by government for fish habitat in fisheries sensitive watersheds is to prevent to the extent described in subsection (3) the cumulative hydrological effects of primary forest activities in the fisheries sensitive watershed from resulting in a material adverse impact on the habitat of the fish species for which the fisheries sensitive watershed was established.*

<b>Table 4.1: Fisheries sensitive watersheds</b>	
Objective	<p>Objective set by Government: FPPR s.8.1  Objective enabled by legislation: GAR s.14  Enabled objectives: No watersheds are listed in FPPR Schedule 2.</p> <p><i>Objective for Fisheries Sensitive Watersheds</i>  For each of the Fisheries Sensitive Watersheds identified by this Order, the objective is to provide, within the normal forest rotation, special management of the amount, timing and distribution of primary forest activities, in order to:</p> <ul style="list-style-type: none"> <li>i. Conserve the natural hydrological conditions, natural stream bed dynamics and integrity of stream channels in the Fisheries Sensitive Watershed,</li> <li>ii. Conserve the quality, quantity and timing of water flows required by fish in the Fisheries Sensitive Watershed, and</li> <li>iii. Prevent the cumulative hydrological effects of primary forest activities in the Fisheries Sensitive Watershed from resulting in a material adverse impact on the fish habitat of the watershed.</li> </ul>
Results or Strategies pursuant to FRPA s.5	No Result or Strategy required. There are currently no Fisheries Sensitive Watersheds in the FDU.
Applies to FDUs	<input type="checkbox"/> FDU 1

## 6.5 FRPA Value: Water in Community Watersheds

*FPPR section 8.2 (1) In this section "community watershed" means a community watershed (a) that is continued under section 180 (e) of the Act, and (b) for which a water quality objective has not been (i) continued under section 181 of the Act, or (ii) established under the Government Actions Regulation.*

*(2) The objective set by government for water being diverted for human consumption through a licensed waterworks in a community watershed is to prevent to the extent described in subsection (3) the cumulative hydrological effects of primary forest activities within the community watershed from resulting in (a) a material adverse impact on the quantity of water or the timing of the flow of the water from the waterworks, or (b) the water from the waterworks having a material adverse impact on human health that cannot be addressed by water treatment required under (i) an enactment, or (ii) the licence pertaining to the waterworks.*

*(3) The objective set by government under subsection (2) applies only to the extent that it does not unduly reduce the supply of timber from British Columbia's forests.*

*(4) If satisfied that the objective set out in subsection (2) is not required to provide special management the minister responsible for the Wildlife Act must exempt a person from the requirement to specify a result or strategy in relation to the objective.*

(5) If satisfied that the objective set out in subsection (2) is addressed, in whole or in part, by an enactment, the minister responsible for the Wildlife Act must exempt a person from the requirement to specify a result or strategy in relation to the objective set out in subsection (2) to the extent that the objective is already addressed.

<b>Table 5.1: Community Watersheds</b>	
Objective	Objective set by Government for Water Quality in a Community Watershed Objectives enabled by regulation: GAR s.8.1: Minister of Agriculture and Lands designates by order a CWS, GAR s.8.2: Ministry of Agriculture and Lands establish water quality objectives:
Results or Strategies pursuant to FRPA s.5	No Result or Strategy required. There are currently no Community Watersheds in the FDU.
Apply to these Forest Development Units:	<input type="checkbox"/> FDU 1

## 6.6 FRPA Value: Wildlife and Biodiversity at Landscape level

*FPPR 9: The objective set by government for wildlife and biodiversity at the landscape level is, without unduly reducing the supply of timber from British Columbia's forests and to the extent practicable, to design areas on which timber harvesting is to be carried out that resemble, both spatially and temporally, the patterns of natural disturbance that occur within the landscape.*

<b>Table 6.1: Cutblock size and green-up</b>	
Objectives	<p>Objective Set by Government: FPPR s.9 Land-Use Objective: Vancouver Island Land Use Plan, Higher Level Plan Order, October, 2000. Section D.</p> <p>Section D of the Order is repeated here for convenience, but if differences exist between the text of the Order and the text herein, the text of the Order prevails: <i>For all Enhanced Forestry Zones, save and except community watersheds:</i></p> <p><i>Objective 7 To increase the short term availability of timber:</i>  <i>(a): A cutblock may be larger than 40 ha pursuant to section 11(2)(a) of the OPR; and</i>  <i>(b): pursuant to section 68(4) of the OPR, a cutblock is greened-up if it is adequately stocked and the average height of those trees that are:</i> <ul style="list-style-type: none"> <li><i>i) the tallest tree in each 0.01 ha plot included in a representative sample, and</i></li> <li><i>ii) a commercially valuable species or other species acceptable to the District Manager</i></li> </ul> <i>is at least 1.3 meters;</i>  <i>unless the District Manager determines that a cutblock referred to under (a) or (b) would significantly impact specific hydrological, wildlife, biodiversity, scenic, or recreation values.</i> </p>

	<p><i>Objective 8: Avoid or mitigate adverse hydrological impacts, which may result from the practices referred to in Objective 7, in watersheds with significant watershed sensitivity and significant fisheries values as determined by the district manager and designated environmental official.</i></p> <p><i>VILUP HLP</i></p> <p><i>Objective 9: When proposing the species composition for the purposes of OSPR s.39(3)(o), a person may, pursuant to OPR s.41, select a single species that is ecologically suited to the area, if a mix of species was present on the area before the timber was harvested.</i></p> <p><i>Objective 9.1: The area that may be subject to a single species pursuant to Objective 9 is limited to no more than 20% of the forested area within a given EFZ.</i></p> <p>The FPPR Practice is repeated here for convenience, but if differences exist between the text of the FPPR and the text herein, the text of the FPPR as it was at time of FSP submission prevails:</p> <p><i>s.64 (1) If an agreement holder other than a holder of a minor tenure harvests timber in a cutblock, the holder must ensure that the size of the net area to be reforested for the cutblock does not exceed (a) 40 hectares.</i></p> <p><i>s.64(2): Subsection (1) does not apply to an agreement holder if</i></p> <ul style="list-style-type: none"> <li><i>a) timber harvesting</i> <ul style="list-style-type: none"> <li><i>(i) is being carried out on the cutblock</i> <ul style="list-style-type: none"> <li><i>(A) to recover timber damaged by fire, insect infestation, wind or other similar events, or</i></li> <li><i>(B) for sanitation treatments, or</i></li> </ul> </li> <li><i>(ii) is designed to be consistent with the structural characteristics and the temporal and spatial distribution of an opening that would result from a natural disturbance, and</i></li> </ul> </li> <li><i>(b) the holder ensures, to the extent practicable, that the structural characteristics of the cutblock after timber harvesting has been substantially completed resemble an opening that would result from a natural disturbance.</i></li> </ul> <p><i>s.64(3) Subsection (1) does not apply if the timber harvesting that is being carried out on the cutblock retains 40% or more of basal area of the stand that was on the cutblock before timber harvesting.</i></p> <p><i>s.64(4) Subsection (1) does not apply if no point within the net area to be reforested is (a) more than two tree lengths from either (i) the cutblock boundary, or (ii) a group of trees reserved from harvesting that is greater than or equal to 0.25 ha in size, or (b) more than one tree length from a group of trees reserved from timber harvesting that is less than 0.25 ha in size.</i></p> <p><i>Harvesting adjacent to another cutblock</i></p> <p><i>65 (1)</i></p> <p><i>In this section:</i></p> <p><i>"adjacent" means an area that is sufficiently close to a cutblock that, due to its location, could directly impact on, or be impacted by, a forest practice carried out within the cutblock;</i></p> <p><i>"existing cutblock" means a cutblock that was previously harvested under an agreement other than a minor tenure;</i></p>
--	---

	<p><i>"new cutblock" means a cutblock on which harvesting has not yet started and that is adjacent to an existing cutblock;</i></p> <p><i>"non-conforming portion" means an area within an existing cutblock on which the stocking and height requirements of subsection (3) have not been met.</i></p> <p><i>(2) An agreement holder other than a holder of a minor tenure must not harvest timber on a new cutblock, unless</i></p> <p style="padding-left: 40px;"><i>(a) all existing cutblocks that are adjacent to the new cutblock meet the requirements set out in subsection (3), or</i></p> <p style="padding-left: 40px;"><i>(b) the combined area of the new cutblock and any non-conforming portions that are immediately adjacent to the new cutblock does not exceed the requirements relating to cutblock size set out in section 64 (1) [maximum cutblock size].</i></p> <p><i>(3) For the purpose of subsection (2) (a), an existing cutblock must meet the criteria set out in one of the following paragraphs:</i></p> <p style="padding-left: 40px;"><i>(a) at least 75% of the net area to be reforested of the existing cutblock is stocked such that the average height of the tallest 10% of the trees on the area is a minimum of 3 m and</i></p> <p style="padding-left: 80px;"><i>(i) is stocked in accordance with the applicable stocking standards, as described under section 16 [stocking standards],</i></p> <p style="padding-left: 80px;"><i>(ii) if the area is on the Coast, other than the Nass timber supply area, is stocked with at least 500 trees/ha of a commercially valuable species that are at least 1.3 m in height, or</i></p> <p style="padding-left: 80px;"><i>(iii) if the area is in the Interior or in the Nass timber supply area, is stocked with at least 700 trees/ha of a commercially valuable species that are at least 1.3 m in height;</i></p> <p style="padding-left: 40px;"><i>(b) the part of the net area to be reforested of the existing cutblock that is closest to the new cutblock</i></p> <p style="padding-left: 80px;"><i>(i) must be at least half of the net area to be reforested,</i></p> <p style="padding-left: 80px;"><i>(ii) is stocked such that the average height of the tallest 10% of the trees on the area is a minimum of 3 m, and</i></p> <p style="padding-left: 80px;"><i>(iii) is stocked</i></p> <p style="padding-left: 120px;"><i>(A) in accordance with the applicable stocking standards for that cutblock, as described under section 16,</i></p> <p style="padding-left: 120px;"><i>(B) if the area is on the Coast, other than the Nass timber supply area, with at least 500 trees/ha of a commercially valuable species that are at least 1.3 m in height, or</i></p> <p style="padding-left: 120px;"><i>(C) if the area is in the Interior or in the Nass timber supply area, with at least 700 trees/ha of a commercially valuable species that are at least 1.3 m in height.</i></p> <p><i>(4) Subsection (2) does not apply if section 64 (2), (3) or (4) apply to the new cutblock.</i></p>
Results or Strategies pursuant to FRPA s.5	<p><u>Result or Strategy:</u> Cutblock size and adjacency limits</p>

	<p>1) The Holder of the FSP must not harvest timber on a new cutblock, unless the cutblock conforms with the applicable results and strategies for the situation and circumstances in the following table:</p> <table border="1"> <thead> <tr> <th data-bbox="483 289 776 352">Situation and Circumstances</th><th data-bbox="776 289 1409 352">Result or Strategy</th></tr> </thead> <tbody> <tr> <td data-bbox="483 352 776 541">General Management Zone Objectives</td><td data-bbox="776 352 1409 541"> <p>1(a) The Holder of the FSP will comply with FPPR s.64 [maximum cutblock size] and s.65 [3m greenup],</p> <p>i) except for s.65(3) which is replaced by result and strategy s. 2 [for consistency of methods with VILUP Objectives].</p> </td></tr> <tr> <td data-bbox="483 541 776 1507">VILUP EFZ Cutblock Size Objectives, save and except community watersheds</td><td data-bbox="776 541 1409 1507"> <p><u>Definitions for the purposes of R/S s.1(b)</u>  “Retention Silvicultural System” means a silvicultural system that is designed to:</p> <ul style="list-style-type: none"> <li>a. retain individual trees or groups of trees to maintain structural diversity over the area of the cutblock for at least one rotation, and</li> <li>b. leave more than half the total area of the cutblock within one tree height from the base of a tree or group of trees, whether or not the tree or group of trees is inside the cutblock.</li> </ul> <p>1(b) If the Holder of the FSP is applying VILUP Objective 7 (a), for cutblock size or combined cutblock size within Enhanced Forestry Zones:</p> <ul style="list-style-type: none"> <li>i) The new cutblock will conform with FPPR ss.64 and 65; except to apply VILUP HLP Order Objective 7(a), instead of the FPPR s. 64(1) maximum cutblock size, the combined area of the new cutblock and any non-conforming portions that are immediately adjacent to the new cutblock may be larger than 40 ha if a retention silvicultural system is used;</li> <li>ii) unless the cutblock would significantly impact specific hydrological (per R/S ss.3 and 4), wildlife, biodiversity, scenic, or recreational values.</li> </ul> </td></tr> <tr> <td data-bbox="483 1507 776 1902">VILUP EFZ Green-up Objectives, save and except community watersheds</td><td data-bbox="776 1507 1409 1902"> <p>1(c) If the Holder of the FSP is applying VILUP Objective 7 (b), for 1.3m greenup, within Enhanced Forestry Zones:</p> <ul style="list-style-type: none"> <li>i) the new cutblock will conform with FPPR ss.64 and 65; **Table 6.5: Late successional habitat elements and attributes of biodiversity – Special Management Zones**

Objectives	<p>Land-Use Objective: Vancouver Island Land Use Plan, Higher Level Plan Order October, 2000</p> <p>The HLP is repeated here for convenience, but if differences exist between the text of the Order and the text herein, the text of the HLP prevails:  VILUP HLP Objective 4 and 5:  For SMZ 8 and parts of SMZ 11, which is located in a Landscape Units with higher biodiversity emphasis:</p> <ol style="list-style-type: none"> <li>1) <i>Maintain late-successional habitat elements and attributes of biodiversity (includes but is not limited to: large diameter (&gt;60cm) live, decaying, and dead standing trees (providing nest and cavity sites); downed wood, including large diameter pieces (50 to 150cm); deciduous broad-leaved trees, both in riparian and upland areas) in forested ecosystems with emphasis on Regionally rare and underrepresented ecosystems, by retaining old seral forest at the site series/surrogate level of representation (The level of representation of old seral forest will be applied through landscape unit planning).</i></li> <li>2) <i>Retain late-successional habitat elements and attributes of biodiversity in patches of variable size.</i></li> </ol>
Results or Strategies pursuant to FRPA s.5	No Result or Strategy required. Not applicable in the FDU.
Apply to these Forest Development Units:	<input type="checkbox"/> FDU 1

**Table 6.6: Non-spatial Old Growth**

Objectives	<p>Objective enabled by regulation: Provincial Non-spatial Old Growth Order June 30, 2004.</p> <p>1) Ministerial Order June 30, 2004 Establishes Landscape Unit Objectives – under FRPA s.9. The Order sections are repeated here for convenience, and if wording in the Order differs from the text herein, the wording in the Order prevails (the Appendices and Tables cited below are located in the Order):</p> <p><i>I. The Landscape Units listed in Appendix 1, Table 1 are established as Landscape Units.</i></p> <p><i>II. This Order establishes landscape unit objectives for the landscape units listed in Appendix 1, Table 1.</i></p> <p><i>A1. For the purpose of implementing objective A2 below biodiversity emphasis is assigned as listed in Appendix 1, Table 1.</i></p> <p><i>A2. Old growth objectives -- To contribute to the conservation of biodiversity, licensees must maintain old forest by biogeoclimatic variant (see implementation policy) within each landscape unit according to the age of old forest and the percentage of old forest retention that is specified in Tables 1 through 4 and the assignment of Natural Disturbance Types outlined in Appendix 3, and subject to provisions 5 through 9 below.</i></p>
------------	---

	<p><u>A5. Potential reduction in old forest retention in low biodiversity emphasis areas.</u> For landscape units with a low biodiversity emphasis, the old forest retention percent listed in Tables 1-4 may be reduced by up to 2/3, to the extent necessary to address impacts on timber supply (see implementation policy).</p> <p><u>A6. Use of younger forests to meet old forest objectives.</u> In intermediate and high emphasis landscape units where it can be demonstrated that equal or better conservation benefits would result, stands less than the age of old, and preferably mature forest, may contribute to the percentage of old forest retention defined in Tables 1-4. (see implementation policy).</p> <p><u>A7. Recruitment and catastrophic natural disturbances.</u> In landscape units where there is: a. An immediate recruitment situation due to insufficient old forest in a variant; or b. An epidemic or catastrophic natural event such as wildfire or insects, A recruitment strategy approved by the Minister of Sustainable Resource Management or his delegate can be used to meet the requirements of Objective 2.</p> <p><u>A8. Draft old growth management areas.</u> Where the Minister of Sustainable Resource Management, his delegate, or a licensee or group of licensees has identified draft old growth management areas, the Minister or delegate may specify in writing that these draft old growth management areas meet the intent of this Order.</p> <p><i>B. When a new order of the Minister of Sustainable Resource Management or delegate establishes old forest objectives, this Order will, on the effective date of the new order, cease to have effect for the area or areas affected by old forest established in the new order.</i></p> <p><i>Where a new order of the Minister of Sustainable Resource Management or delegate establishes old forest objectives for a portion of a landscape unit that is established under this Order, this Order remains in effect for the portion of the landscape unit for which the new order does not establish old forest objectives.</i></p> <ol style="list-style-type: none"> <li>1) Land-Use Objective: Vancouver Island Land Use Plan, Higher Level Plan Order October, 2000, Objective 14.</li> <li>2) Lower Nimpkish LU Order -- effective October 24, 2005</li> <li>3) Upper Nimpkish LU Order -- effective October 24, 2005</li> </ol>
Results or Strategies pursuant to FRPA s.5	<p><u>For Landscape Units with legally established OGMAs:</u></p> <p>1) In accordance with Section B of the Non Spatial Order, where spatially defined OGMAs are established in the plan area, Table 6.7 of this FSP will apply to those areas.</p> <p><u>For Landscape Units with Draft OGMAs:</u></p> <p>2) As a Strategy, to comply with the "Order Establishing Provincial Non-Spatial Old Growth Objectives", effective June 30, 2004, each Holder adopts the Order and in so doing, will not cause the target retention of old forest or younger forest by landscape unit, natural disturbance type and biogeoclimatic zone to fall below the amounts specified in the Order, except as permitted by the Order.</p>
Apply to these Forest Development Units:	<input checked="" type="checkbox"/> FDU 1

## 6.7 FRPA Value: Wildlife and Biodiversity Stand level

*FPPR Section 9.1: The objective set by government for wildlife and biodiversity at the stand level is, without unduly reducing the supply of timber from British Columbia's forests, to retain wildlife trees.*

Table 7.1: Wildlife trees	
Objective	<p>Objective set by government: FPPR Section 9.1</p> <p>The default Practice is repeated here for convenience, but if differences exist between the text of the FPPR and the text herein, the text of the FPPR as it was at time of FSP submission prevails:</p> <p><i>FPPR s.66: (1) If an agreement holder completes harvesting in one or more cutblocks during any 12 month period beginning on April 1 of any calendar year, the holder must ensure that, at the end of that 12 month period, the total area covered by wildlife tree retention areas that relate to the cutblocks is a minimum of 7% of the total area of the cutblocks</i></p> <p><i>(2) An agreement holder who harvests timber in a cutblock must ensure that, at the completion of harvesting, the total amount of wildlife tree retention areas that relates to the cutblock is a minimum of 3.5% of the cutblock.</i></p> <p><i>(3) For the purposes of subsection (1) and (2), a wildlife tree retention area may relate to more than one cutblock if all of the cutblocks that relate to the wildlife tree retention area collectively meet the applicable requirements of this section.</i></p> <p><i>s.67: An agreement holder must not harvest timber from a wildlife tree retention area unless the trees on the net area to be reforested of the cutblock</i></p>

to which the wildlife tree retention area relates have developed attributes that are consistent with a mature seral condition.

s.91(2) The minister may exempt an agreement holder from section 67 if the minister is satisfied that the holder has specified one or more wildlife tree retention areas that provide an area, number of trees or habitat that is equivalent to the portion of the wildlife tree retention area from which the timber is being harvested.

Lower and Upper Nimpkish LU (2005)

Objective 2 – Wildlife Tree Retention

Maintain stand-level structural diversity, by retaining wildlife tree patches (WTPs). The holder of an agreement under the Forest Act, except a woodlot licence agreement, who completes harvesting in one or more cutblocks, except minor salvage cutblocks<sup>2</sup>, located within the LU during any 60 month period beginning on January 1 of any calendar year following the establishment of this objective, must ensure that, at the end of that 60 month period, the total area covered by wildlife tree retention areas that relate to the cutblocks, meets or exceeds the percent of the total harvest area (Net Area to be Reforested + permanent road area) of the cutblocks by subzone presented in Table B.

Table B. Wildlife tree retention (WTR) by BEC unit in the Lower Nimpkish Landscape Unit

CWHxm	11
CWHvm	9
MHmm	1

Table B. Wildlife tree retention (WTR) by BEC unit in the Upper Nimpkish Landscape Unit

Biogeoclimatic Unit,	% WTR requirement of the harvest area
CWHxm	13
CWHmm	14
CWHvm	9
MHmm	3

In addition:

- (1) WTPs must be well distributed across the BEC subzone.
- (2) When designated at the site plan level, WTPs must be located within Or immediately adjacent to a cutblock.
- (3) No timber harvesting, including single tree selection is to occur within WTPs, except as noted below:
  - (a) Falling of danger trees;
  - (b) Salvage of windthrown timber is permitted within WTPs where windthrow impacts 25% to 50% of the dominant or co-dominant stems. Salvage of windthrown timber and harvesting of remaining standing stems is permitted within WTPs where windthrow exceeds 50% of the dominant or co-dominant stems; or where forest health issues pose a significant threat to areas outside the WTP. Where such salvage/harvesting is planned and authorized, suitable replacement WTP of at least equivalent area must be identified to achieve the retention target.
- (4) WTPs should include, if present, remnant old-growth patches and live or dead veteran trees (excluding danger trees).

	<p>(5) WTPs should include representative larger trees (dbh &gt; average operational cruise) for the stand and suitable wildlife trees, if available, as well as identified wildlife habitat features, if present (excluding danger trees).</p> <p>(6) BEC subzones and variants will be determined by site plan information.</p> <p>(7) [Upper Nimpkish LU only] In WTPs with a high likelihood of windthrow, pruning and/or topping may be carried out to maintain the integrity of the WTP.</p> <p>If these Orders are revised and replaced, the new WTP requirement will apply.</p>
Results or Strategies pursuant to FRPA s.5	<p><u>Result or Strategy:</u></p> <p>1) Upper Nimpkish, Lower Nimpkish LUs: On the basis of FPPR s.12 (5)<sup>3</sup> and FPPR s.25.1(2)<sup>4</sup>, the Holder of the FSP undertakes to comply with the Upper Nimpkish Landscape Unit Plan Order and Lower Nimpkish Landscape Unit Plan Order objectives for any percent WTRA requirement identified in the most recent Order (if the replacement order contains a requirement) by biogeoclimatic subzone, except that minor salvage cutblocks, of less than or equal to 2 ha of harvesting and/or less than or equal to 2,000m<sup>3</sup> excluding road clearing width if the road is required to facilitate the removal of timber in the minor salvage cutblock, are exempt.</p> <p>2) Unless subsection 1 applies, the Holder of the FSP adopts FPPR s.66, as it was at the time of FSP submission, as a result or strategy, except that minor salvage cutblocks, of less than or equal to 2 ha of harvesting and/or less than or equal to 2,000m<sup>3</sup> excluding road clearing width if the road is required to facilitate the removal of timber in the minor salvage cutblock, are exempt.</p> <p>3) With respect to FPPR s.67, the Holder of the FSP must not harvest timber from a wildlife tree retention area unless the trees on the net area to be reforested of the cutblock to which the wildlife tree retention area or WTP relates have developed attributes that are consistent with a mature seral condition, except:</p> <ul style="list-style-type: none"> <li>a) timber may be harvested for establishment of tail holds or guyline tiebacks;</li> <li>b) danger trees may be felled;</li> <li>c) WTPs established under pre FRPA site plans may be managed to the current percentage retention requirements that are specified by higher level plan order or the FPPR; or</li> <li>d) where the Holder of the FSP harvests a WTP or WTRA (from previous site plans, pre harvest silviculture prescriptions, or silviculture prescriptions), and the Holder of the FSP specifies one or more replacement wildlife tree retention areas that provide an area, number of trees, or habitat, that is equivalent to the portion of the</li> </ul>

<sup>3</sup> FPPR s.12 (5): If 2 or more established objectives are applicable to (a) a common area, and (b) the same or a similar subject matter, the minister may exempt a person who is required to prepare a forest stewardship plan from the requirement to specify a result or strategy for all but one of the established objectives.

<sup>4</sup> FPPR s.25.1(2) If an established objective is comprised of measurable or verifiable steps, processes or outcomes, an intended FSP result or strategy that restates the same measurable or verifiable steps, practices or outcomes, and describes the circumstances in which those are to be achieved or carried out, is to be considered to be consistent with objectives set by government and with the other established objectives to the extent practicable.

	<p>wildlife tree retention area from which the timber is being harvested. At a minimum, the retention objectives specified in FPPR s.66 or in approved landscape unit plans will be achieved.</p> <p>4) Definition for purposes of the result or strategy: WTP/WTRA % means assessed as a percent of NAR + permanent road area in the cutblock.</p>
Apply to these Forest Development Units:	<input checked="" type="checkbox"/> FDU 1

## 6.8 FRPA Value: Wildlife

*Objectives set by government for wildlife: FPPR s.7(1): The objective set by government for wildlife is, without unduly reducing the supply of timber from British Columbia's forests, to conserve sufficient wildlife habitat in terms of amount of area, distribution of areas and attributes of those areas, for (a) the survival of species at risk, (b) the survival of regionally important wildlife, and (c) the winter survival of specified ungulate species.*

*(2) A person required to prepare a forest stewardship plan must specify a result or strategy in respect of the objective stated under subsection (1) only if the minister responsible for the Wildlife Act gives notice to the person.*

*(3) If satisfied that the objective set out in subsection (1) is addressed, in whole or in part, by an objective in relation to a wildlife habitat area or an ungulate winter range, a general wildlife measure, or a wildlife habitat feature, the minister responsible for the Wildlife Act must exempt a person from the obligation to specify a result or strategy in relation to the objective set out in subsection (1) to the extent that the objective is already addressed.*

**Table 8.1: Marbled Murrelet (*Brachyramphus marmoratus*)**

Objectives	<p>1) Species at Risk Order-Categories of Species at Risk, May 3, 2004; 2) Objectives enabled by regulation:</p> <p><u>Notice for indicators of the amount, distribution and attributes of wildlife habitat required for the survival of the species at risk in the CRFD, July 27, 2004</u></p> <p>Amount:</p> <ol style="list-style-type: none"> <li>1. An amount of suitable nesting habitat equivalent to a net mature timber harvesting landbase impact of 1431 ha.</li> <li>2. An amount of habitat in the non-contributing landbase equal to the total amount of currently suitable nesting habitat in the non-contributing landbase.</li> <li>3. Government policy for determining the amount of suitable nesting habitat is provided in the species account for Marbled Murrelet in the Accounts and Measures for Managing Identified Wildlife (Identified Wildlife Management Strategy Version 2004).</li> </ol> <p>Distribution:</p> <ol style="list-style-type: none"> <li>1. ## 6.9 FRPA Value: Visual Quality

*FPPR s.1: "altered forest landscape" means forest landscape that (a) is viewable from a significant public viewpoint, (b) contains cutblocks or roads, and (c) is in one of the categories prescribed under section 1.1*

### *FPPR s.1.1 Categories of visually altered forest landscape*

*The following categories are prescribed, each according to the extent of alteration resulting from the size, shape and location of cutblocks and roads -- consisting of an altered forest landscape in which the alteration, when assessed from a significant public viewpoint is:*

*(a) preservation: (i) very small in scale, and (ii) not easily distinguishable from the pre-harvest landscape;*

*(b) retention: (i) difficult to see, (ii) small in scale, and (iii) natural in appearance;*

*(c) partial retention: (i) easy to see, (ii) small to medium in scale, and (iii) natural and not rectilinear or geometric in shape;*

*(d) modification: (i) is very easy to see, and (ii) is (A) large in scale and natural in its appearance, or (B) small to medium in scale but with some angular characteristics;*

*(e) maximum modification: (i) is very easy to see, and (ii) is (A) very large in scale, (B) rectilinear and geometric in shape, or (C) both.*

<b>Table 9.1: Visual quality</b>	
Objectives	<p>The following objectives are enabled in the plan area:</p> <p><u>VILUP HLP, Objective 6:</u> <i>Maintain the visual quality of known scenic areas in accordance with the recommended visual quality classes in the visual landscape inventory, until the district manager establishes visual quality objectives for the area.</i></p> <p><u>GAR s.7 (1)</u> GAR Orders establishing scenic areas and visual quality objectives in the Campbell River Forest District Dec 14, 2005, and cancelled previous GAR VQO's.</p> <p>GAR s.17 continued recommended visual quality classes as VQOs in TFL 37.</p>
Results or Strategies pursuant to FRPA s.5	<ol style="list-style-type: none"> <li>For the purposes of FPPR s.9.2, as a Strategy, each Holder will comply with the Categories of Visually Altered Forest Landscape <sup>5</sup>, established: <ol style="list-style-type: none"> <li>In that portion of the FDU not within TFL 37, the "Order – Establishment of Scenic Areas and Visual Quality Objectives for the Campbell River Forest District" (2005); or</li> <li>In TFL 37, visual quality classes continued under section 17 of the Government Actions Regulation, effective December 13, 2004;</li> </ol> </li> <li>Where required, a Visual Impact Assessment (VIA) will be conducted according to the ABCFP's 'Guidance for Forest Professionals Practicing in Visual Resource Management', as amended from time to time;</li> <li>Each Holder will ensure that the recommendations in an applicable VIA are followed to the extent practicable, including mitigation measures such as tree crown modification of timbered edges;</li> </ol>

<sup>5</sup> As defined in FPPR s.1.1.

	<p>4. The scenic areas and VQOs apply to a road permit, cutting permit or area declared under FPPR s.14(4), as the scenic areas and VQOs were on the date of submission. This Result or Strategy applies to new objectives established under GAR s.7 on the effective date of the Order; and</p> <p>5. If the road or harvesting relates to the harvesting of timber that is damaged or destroyed by fire insects, disease, wind, flooding or other factor, and it is not practicable to meet the established VQO, a Holder may make an application for an exemption to the objective under FPPR s.12(7).</p>

## 6.10 FRPA Value: Cultural Heritage Resources

*FPPR 10 The objective set by government for cultural heritage resources is to conserve, or, if necessary, protect cultural heritage resources that are (a) the focus of a traditional use by an aboriginal people that is of continuing importance to that people, and (b) not regulated under the Heritage Conservation Act.*

Table 10.1: Cultural Heritage Resources	
Objectives	FPPR section 10
Results or Strategies pursuant to FRPA s.5	<p><b>RESULT OR STRATEGY</b></p> <p><b>1) DEFINITIONS AND INTERPRETATION</b></p> <p>In:</p> <p>(a) Paragraphs 1 to 3:</p> <p>(i) <b>“First Nation CHR Information”</b> means information regarding a <b>Potentially Affected CHR</b> within the <b>FDUs</b> provided to the <b>Holder of the FSP</b> by a First Nation affected by this <b>FSP</b>:</p> <p>(A) prior to review and comment pertaining to the proposed form of this <b>FSP</b> under section 20 of the <b>FPPR</b>;</p> <p>(B) during review and comment pertaining to the proposed form of this <b>FSP</b>, in accordance with section 21 of the <b>FPPR</b>; or</p> <p>(C) during the term of this <b>FSP</b>; and</p> <p>(ii) <b>“Potentially Affected CHR”</b> means a <b>cultural heritage resource</b> that is:</p> <p>(A) subject to section 10 of the <b>FPPR</b>;</p>

	<p>(B) not conserved or protected by other arrangements;</p> <p>(C) capable of being addressed in the context of this <b>FSP</b>; and</p> <p>(D) important, valuable and scarce, as determined by government:</p> <p>(I) based on traditional use by an aboriginal people; and</p> <p>(II) from consultation with a First Nation regarding <b>First Nation CHR Information</b> it has provided; and</p> <p>(b) In Paragraph 2, the reference to availability to, and the historical extent of traditional use by, an aboriginal people means such availability and use at the level of the asserted traditional territory of that aboriginal people.</p> <p><b>2) INFORMATION GATHERING AND SHARING</b></p> <p>The <b>Holder of the FSP</b> will, at least once each calendar year:</p> <p>(a) For each First Nation with asserted traditional territory within the <b>FDUs</b>:</p> <p>(i) identify the approximate location of planned cutblocks and roads, if any, to which this <b>FSP</b> applies that are within that asserted traditional territory and not previously identified by the <b>Holder of the FSP</b> to that First Nation;</p> <p>(ii) request from that First Nation information, regarding any <b>Potentially Affected CHR</b> and the historical extent of traditional use, not previously provided by the First Nation to the <b>Holder of the FSP</b>; and</p> <p>(iii) if information has been identified under subparagraph (a)(ii), request a meeting or communicate with that First Nation to review the access, conservation or, if necessary, protection of the <b>Potentially Affected CHR</b>.</p> <p>(b) provide to the Crown any <b>First Nation CHR Information</b> not previously provided by the <b>Holder of the FSP</b> to the Ministry; and</p> <p>(c) request from the Crown updated information regarding any <b>Potentially Affected CHR</b> and any determination referred to in Paragraph 1(a)(ii)(D) that has not already been provided by the Crown to the <b>Holder of the FSP</b>.</p> <p><b>3) MONUMENTAL CEDAR OR LARGE CULTURAL CEDARS</b></p> <p>The <b>Holder of the FSP</b> will:</p>
--	---

	<p>(a) plant, or promote natural regeneration of cedar as a component of future stands on areas where:</p> <p>(i) the <b>Holder of the FSP</b> has an obligation under section 29(1) of the <b>Act</b>;</p> <p>(ii) cedar is ecologically suited; and</p> <p>(iii) doing so is consistent with the obligations under that section; and</p> <p>(b) if requested by a First Nation with asserted traditional territory within <b>FDUs</b> that has historically utilized western red cedar or yellow cedar from that traditional territory for making paddles, masks, totems, canoes or other similar traditional use items, and to the extent of such historical use, develop cedar strategies and assist that First Nation in identifying or locating cedar trees and obtaining logs suitable for such purpose.</p>
Apply to these Forest Development Units:	<input checked="" type="checkbox"/> FDU 1

## 6.11 FRPA value: Recreation

*FRPA section 56(3) The minister may establish an objective for an interpretive forest site, recreation site or recreation trail established under subsection (1).*

<b>Table 11.1: Recreation sites and trails</b>	
Objectives	FRPA s.56 objectives have not been created for the existing recreation sites.
Results or Strategies pursuant to FRPA s.5	<p>No results or strategies required. WFP manages FRPA Section 56 and FPC s.102 established sites in accordance with the s.56 or grandfathered s.102 agreement for the site, as amended from time to time.</p> <p>Note that recreation resource features have been established in CRFD, see below and Table 12.1.</p>

## 6.12 FRPA Values: Resource Features

*GAR 5 (1) Subject to subsection (2), the minister responsible for the Forest Act by order may identify one or more of the following as resource features in relation to a specified area:*

- (a) a surface or subsurface element of a karst system;*
- (b) a range development;*
- (c) Crown land used for research or experimental purposes;*
- (d) a permanent sample site used as a snow course by or on behalf of the federal or provincial government for the purpose of measuring the water content of the snow pack on a given area;*
- (e) a cultural heritage resource that is the focus of a traditional use by an aboriginal people and that is not regulated by the Heritage Conservation Act;*
- (f) an interpretive forest site, recreation site or recreation trail;*
- (g) a trail or other recreation facility referred to in section 57 of the Act that is authorized by the minister or under another enactment;*
- (h) a recreation feature that the minister considers to be of significant recreational value.*

*(2) The minister responsible for the Forest Act may make an order under subsection (1) if the minister is satisfied that the resource feature requires special management not otherwise provided for under this regulation or another enactment.*

*(3) The identification of a resource feature under subsection (1) (a) may be by category or type, and may be restricted to a specified geographic location, and (b) must be sufficiently specific to enable a person affected by it to identify the resource feature in the ordinary course of carrying out forest practices or range practices.*

*(4) Despite subsections (1) to (3), if the minister responsible for the Forest Act reasonably believes that a resource feature may be subject to damage or disturbance if the location of the resource feature is, he or she (a) must not disclose the location of the feature in the order, disclosed (b) must provide written notice of the location of the feature to the holders of agreements under the Forest Act or the Range Act that will be affected by the order, and (c) may attach conditions to the order (i) prohibiting those holders from disclosing the location of the feature, or (ii) restricting the extent to which, or the persons to whom, those holders may disclose the location of the feature.*

*(5) A person to whom a condition referred to in subsection (4) (c) applies must comply with the condition.*

**Table 12.1: Resource features (Karst, Recreation, etc)**

Objectives	<p>Resource features are practice requirements outside of the FSP, and are mentioned here only as background information supporting the plan. Because no objectives are specified in resource feature orders, results or strategies are not required.</p> <p>GAR s.5: Minister may identify resource features.</p> <p>FPPR s.70(1): Must ensure that the activity does not damage or render ineffective a resource feature</p> <p>FPPR s.91(1) minister may grant exemption to 70(1) if not practicable in particular area</p> <p>Current Orders:</p> <p>1) Recreation Resource Features: April 12, 2006 GAR Order to identify Recreation Resources features for the Campbell River Forest District.</p> <p>2) Karst Features: Order to Identify Karst Features for Campbell River Forest District. June 30, 2007. Order to Identify Karst Features for North Island Central Coast Forest District. March 29, 2007. Per the Orders, the following Karst Resource Features for surface or subsurface elements of a karst system will apply:</p> <ul style="list-style-type: none"> <li>• Karst caves</li> <li>• The important features or elements within very high or high vulnerability karst.</li> <li>• Significant surface karst features.</li> </ul>
Background Information	<p>Results and strategies are not prepared for resource features; however, FPPR s.70 will apply.</p> <p>Other types of resource features have not yet been designated, but when designated FPPR s.70 will apply.</p> <p>Western Forest Products has prepared a Karst Management Standard that is based on the Provincial Guidance and best available information.</p>

## 7. FRPA Measures:

### 7.1. Invasive Plants

*FPPR s.17: For the purpose of section 47 [invasive plants] of the Act, a person who prepares a forest stewardship plan must specify measures in the plan to prevent the introduction or spread of species of plants that are invasive plants under the Invasive Plants Regulation, if the introduction or spread is likely to be the result of the person's forest practices.*

**Table 13.1.1: Priority Species<sup>6</sup>**

Priority	Species
Prevent	Yellow Starthistle
Provincial EDRR	Perennial Pepperweed

<sup>6</sup> Correlated list between the Invasive Plants Regulation and the document titled 'Provincial Priority Invasive Species – BC Inter-Ministry Invasive Species Working Group' (March 2021), on the effective date of this FSP.

Provincial Containment	Giant Hogweed, Rush Skeletonweed
Regional Containment/Control	Blueweed, Common Tansy, Field Scabious, Hoary Alyssum, Hoary Cress, Knotweeds (Japanese, Giant, Bohemian, Himalayan), Leafy Spurge, Marsh Plume Thistle, Orange Hawkweed, Puncture Vine, Scotch Broom, Spotted Knapweed, Teasel, Yellow Flag Iris
Management	Gorse, Purple Loosestrife, Scentless Chamomile, Scotch Thistle, Sulphur Cinquefoil, Tansy Ragwort

**Table 13.1.2: Priority Categories and Provincial Objectives for Invasive Plants<sup>7</sup>**

Priority Category	Category Description	Management Objective
Prevent	Species determined to be high risk and not yet established.	Prevent introduction and establishment.
Provincial EDRR	Species is high risk and is new to the Province	Eradication.
Provincial Containment	Species is high risk with limited extent but significant potential to spread.	Prevent further expansion into new areas with the ultimate goal of reducing the overall extent.
Regional Containment/Control	Species is high risk and well established, or medium risk with high potential to spread.	Prevent further expansion into new areas within the region through establishment of occurrences outside the line to control
Management	Species is more widespread by may be of concern in specific situations with certain high values – e.g. conservation lands or specific agriculture crops.	Reduce the invasive species impacts locally or regionally, where resources are available.

Definitions for the purposes Measures in s.7.1 of this FSP

“**Applicable Area**” means an area of exposed mineral soil that is at least a contiguous 0.1 ha.

“**Priority Categories**” means the priority categories listed in Table 7.2 of s.7.1 of this FSP.

“**Priority Species**” means those invasive species listed in Table 7.1 of s.7.1 of this FSP.

Measure – FPPR s.17

1. For the purposes of FPPR s.17, each **Holder** will, as a **Measure**:
  - a. Incorporate known invasive **Priority Species** into development plans and report new sites as they are discovered, by
    - i. In the planning process, consulting the map display module of the Invasive Alien Plant Program (IAPP) online database for known invasive **Priority Species** ([www.for.gov.bc.ca/hra/plants/application.htm](http://www.for.gov.bc.ca/hra/plants/application.htm));
    - ii. Distribute information to staff and contractors on **Priority Species** that exist or threaten to establish within the plan area, on an annual basis; and
    - iii. Monitoring areas for the presence of invasive species while conducting road and cutblock layout, road reactivation surveys, site plan fieldwork, contractor inspections, and silviculture surveys; and
    - iv. Reporting new incidences of invasive plants in the company's spatial database and through Report-a-Weed or similar technology to the Invasive Alien Plant Program (IAPP) within 30 days of discovery;
  - b. Work in uninfested sites before moving to infested sites;
  - c. Clean equipment within existing infestations of **Priority Species**, to the extent practicable, before moving to a new work site or region, by

<sup>7</sup> Adopted from the definitions contained in the document titled ‘Provincial Priority Invasive Species – BC Inter-Ministry Invasive Species Working Group’ (March 2021).

- i. Pressure-washing mud from vehicles and equipment, while preventing run-off from contaminating waterways and riparian areas; or
- ii. Visually inspecting vehicles and equipment and removing lodged plant parts found;
- d. Inspect and ensure fill and erosion-control materials are not taken from sites infested with **Priority Species**;
- e. Direct all contractors and staff to not brush or mow **Priority Species**;
- f. Minimize unnecessary soil disturbance and maintain native vegetation, especially in areas infested with **Priority Species**;
- g. Revegetate a disturbed site that is an **Applicable Area** as soon as possible with weed-free Common No.1 Forage Mixture or better; and
- h. Promptly control infestations of **Priority Species** resulting from **Primary Forest Activities**, if in the infestation is a knotweed species, or in the **Prevent, Provincial EDRR** or **Provincial Containment Priority Categories**, or after consultation with a Provincial Invasive Species Specialist if in the Regional Containment/Control priority category.

Apply to these Forest Development Units:	<input checked="" type="checkbox"/> FDU 1
--	---

**Table 13.2: Natural Range Barriers**

Objectives	FPPR s.18 requires measures to be specified in a FSP
Background Information	There are no natural range barriers in the FDU under this FSP.

## **8. STOCKING STANDARDS**

### **8.1 Application**

The stocking standards are to apply to areas harvested under this FSP, in all FDU's.

The stocking standards apply to the Net Area to be Reforested (NAR). Landslides are excluded from the NAR. Riparian Reserve Zone (RRZ) harvested under the results or strategies outlined in Table 3.2 are included in the NAR.

### **8.2 Application to Cutblocks Where Harvesting Began Before Term Commences (Act s.197(5)) and declaration was not received by MFLNRO within RESULTS**

See s. 3.2(d)(iv) of this FSP.

### **8.3 Situation or Circumstances that Determine Whether Free Growing is Assessed on a Block Basis (FPPR s.44(1) or Across Blocks (FPPR ss.45(1) and (2)) (FPPR s.16(1))**

Section 44 (1) applies in all situations or circumstances under the FSP where a free growing stand is required to be established under FRPA s. 29.

### **8.4 Stocking and Related Standards for Stands to which Free Growing Obligations Apply**

There may be relatively uniform conditions or mosaics (ecosystem complexes), transitional ecosystem sites, and varying site conditions within an area. The area will be stratified into SUs of similar characteristics for the purposes of stocking standards to the extent the delineation and mapping of site series into separate SU is practicable to meet stratification principles. The two options for assignment of standards to the SU are:

- i) The assessment area will be classified at the entire SU based on the applicable standard from Appendix 1.1, and the dominant site series in the SU will be used to assign the stocking standard for species, TSS, MSS, MITD, and free growing heights; or
- ii) The assessment Area will be classified at each plot based on the applicable standard from Appendix 1.1, and the dominant site series in each plot will be used to assign the stocking standard for species, TSS, MSS, MITD, and free growing heights for the Assessment Area, and used to summarize the SU.

#### **8.4.1 Species**

Species selection to determine compliance with section 44(1) of the FPPR will be based on the ecosystem classification and be evaluated at the Assessment Area (AA) level. Species which are ecologically suitable and commercially valuable for each site series are listed in Appendix 1.1.

#### **8.4.2 Stocking (Even-Aged Stocking Standards)**

##### **8.4.2.1 Target Stocking Standards**

- (a) Target Stocking Standards (TSS) listed in Appendix 1.1 will used to assess the achievement of an acceptable stocking level on an Assessment Area.

(b) In areas where heavy elk use stocking standards are applied, the TSS will be 1200 sph, to allow for clumpy stocking. Heavy elk use may occur in whole blocks, entire SUs, or portions of these - where practicable, the elk use areas will be stratified within SUs to identify the areas requiring heavy elk use standards

#### **8.4.2.2 Minimum Stocking Standards**

(a) Minimum Stocking Standards (MSS) listed in Appendix 1.1 will be used to assess the achievement of an acceptable stocking level on an Assessment Area.

(b) The standard for heavy elk use areas will be 50% of the minimum stocking standard (MSS) in Appendix 1.1..

#### **8.4.2.3 Minimum Horizontal Inter-Tree Distance**

Minimum Horizontal Inter-Tree Distances listed in Appendix 1.1 will be used to ensure that stocking distribution is taken into account when assessing stocking levels in the Assessment Area (options defined in 8.4).

#### **8.4.2.4 Minimum Height Over Brush**

For the CWH biogeoclimatic zone, the minimum free-growing height over competitive brush species will be 150%.

For the MH biogeoclimatic zone, the minimum free-growing height over competitive brush species will be 125%.

#### **8.4.3 Regeneration Date**

Regeneration date will be 6 years.

#### **8.4.4 Minimum Free Growing Height**

Minimum free growing heights listed in Appendix 1.1 will be used to demonstrate that the trees are adapted to the site, and are growing well and can reasonably be expected to continue to do so. Minimum free growing height will be assigned at the Assessment Area (AA) level based on the AA's ecosystem classification based on the dominant site series of the AA.

### **8.5 Hardwood Management**

Deciduous species will be the leading species for hardwood management.

For Hardwood Management:

- a. at least 80% of the total stocking will be alder, and
- b. the stocking level will be an average within a standards unit of not less than 1000 trees per hectare.

Heavy elk use stocking standards will not be used in hardwood management areas.

## 8.6 Intermediate Cutting (FPPR s.16(4) and s.44(4))

Where commercial thinning, removal of individual trees, a similar type of intermediate cutting or harvesting of special forest products (FPPR 44(3)(h-i)) occurs, stocking within each harvest unit will be maintained above 40 m<sup>2</sup>/ha for a period of at least 12 months after harvest completion. Intermediate cutting rules apply to conifer management only. Openings greater than 0.25 ha will be managed using even-aged stocking standards. Where intermediate cutting is applied, the residual stand will consist of ecologically suitable species that will be viable for future harvest opportunities. A stocking standard ID's will be created via the RESULTS system and additional site series will be added to the standard, as required, using the approved variation mechanism.

## 8.7 High Retention Harvesting – SEDRSS (FPPR s.16(1) and s.44(1))

SEDRSS (Single Entry Dispersed Retention Stoking Standard) standards may be applied where basal area retention following harvest is between 5 and 40 m<sup>2</sup>/ha. Justification for high retention harvesting will be documented in the Cutblock Site Plan, consistent with Table 14. The Single Entry Dispersed Retention Stocking Standard Framework Implementation Guide (Coastal), 2014, provides guidance for high retention harvesting (as revised by CRIT from time to time). See Appendix 1.3 for the stocking standard to be approved with this FSP.

**Table 14. High Retention Management Decision (SEDRSS)**

Situations or Circumstances	Standard
<b>1. Type of Silviculture System</b>	Partial Cutting with Regeneration Obligation – Use SEDRSS (Single Entry Dispersed Retention Stocking Standard). The silviculture system is Retention.
<b>2. Stocking standards applicable</b>	SEDRSS outlines stocking standard criteria based on basal area retained and site index. Additional biogeoclimatic subzones and site series may be added through approved variations.  Survey methodology will be consistent with the SEDRSS Implementation Guide (Feb. 14, 2014).  SEDRSS includes: stratification, overstory, understory, survey methodology, and stocking decision (Option 2 will be used in FDU 1). Results reporting will be as outlined in the Implementation Guide.
<b>3. Species to be retained</b>	As per the Implementation Guide (2014). Conifer species only.
<b>4. Maximum Basal Area % Reduction (Quantity)</b>	SEDRSS are to be applied where the residual basal area (RBA) within a selected harvest area is 5 – 40 m <sup>2</sup> /ha, and per the stratification guidelines in the Implementation Guide.
<b>5. Maximum Opening size (Distribution)</b>	Consistent with the Implementation Guide. Openings larger than 0.25 ha will be stratified and even-aged stocking standards will be applied.
<b>6. Characteristics of Retained Trees or Remaining Stand</b>	Leave tree form, health, and vigour will conform to the SEDRSS Damage Criteria in the Implementation Guide.
<b>7. Scope</b>	FDU 1 - Non-timber values and objectives are the primary management focus (visuals, recreation, terrain stability, riparian and cultural). The specific value will be indicated in the Cutblock Site Plan.
<b>8. Scale</b>	0-1% of the harvest volume during the lifetime of this FSP.

## **9.0 Signature(s) (FRPA Act s.5(3))**

### CERTIFICATION OF SIGNING PROFESSIONAL

I certify that the work described herein fulfills the standards expected of a member of the Association of British Columbia Forest Professionals and that I did personally supervise the work.

## Appendix 1: Stocking Standards

The stocking standards SSID's in Results are:  
 Even aged: 1051711  
 Intermediate Cut: 1052043  
 SEDRSS: 1052044  
**Alder:**

Species selection will occur at the Assessment Area (AA) level based on the AA's dominant site series. The Assessment Area (AA) is defined as the Standards Unit (SU) area in the site plan, or alternatively is defined as the ecosystem classification at each sample plot area in the survey. Ecologically suitable species for each site series are listed in the table below. Appendix 1.1 defines even-aged stocking standards for use in RESULTS.

### Appendix 1.1 - Species Selection and Stocking Targets

\* - Refers to AAs which are being managed for hardwoods under Section 8.5.

General Notes for Appendix 1.1:

Ba – In west coast CWH vm 1 transitional to CWH vh1, and CWH vh1, suitable in the absence of salal in proximity to the tree at the plot level (applies to west coast sites that are a mosaic of 01/01s or 06/06s or transitional to vh1). Does not include salal only growing on rotten wood.

Bp – Initial regeneration of Bp (noble fir) is restricted to nutrient medium sites or better. Northerly aspects are to be avoided. Initial regeneration of Bp will not comprise more than a 20% component to mitigate risk.

Bg – for CWHxm06 restricted to nutrient-medium sites, CWHxm06 minor component, CWHxm06,07,08,09,13,14 risk of balsam woolly adelgid.

Bg restricted to Upper Nimpkish area of the CWH mm, not acceptable in other CWH mm areas. The natural distribution of grand fir extends into the Upper Nimpkish according to The Distribution and Synopsis of Ecological and Silvical Characteristics of Tree Species of British Columbia's Forest (2000). The Upper Nimpkish was classified as CWHxm until 2000. The area was reclassified as CWHmm1 by R.N. Green in 2000. MoF map dated April 2003 still shows the area as CWHxm. Grand fir is required for fill-planting where shade tolerance is required due to brush and where Cw cannot be used due to elk and deer browsing.

Hm – Where this species is encountered outside of the MHmm1, Hm is a viable crop tree in areas transitional to the montane zone or in cold air drainages.

PI – Refers to Plc. The use of PI to meet the MSS is limited to 20%.

Pw – use of resistant stock mitigates risk of white pine blister rust. Do not use non-resistant stock for reforestation (unless pruned). Pw is to be from seed which has been selected to be resistant to *Cronartium ribicola*, or is to be pruned prior to FG declaration. Pruned means consistent with BC Journal of Ecosystems and Management 10(1): 97-100, or any updates to the best available information on Pw pruning.

Ss – If Ss is from seed sources selected for high resistance to *Pissodes strobi*, the use of Ss to meet the MSS is unlimited in areas of moderate and high risk of spruce weevil damage; otherwise, the use of natural Ss to meet the MSS is limited to 20% in moderate-high spruce weevil risk areas.

Yc – is commonly found to sea level on the west coast of Vancouver Island but is rare below 400 m on the east coast.

01s or 06s refer to salal phases in the CWHvm1 BGC subzone, as defined in Land Management Handbook (LMH) 28.

01b or 06b refer to lithic phases and fragmental soils. Clumpy stocking is natural in these areas, where microsite conditions are highly variable over short horizontal distances. "Lithic phases occur on sites with organic veneers over thin (<10 cm) mineral soil over bedrock or boulders". The lithic definition is found in A Field Guide to Site Identification and Interpretation for the Prince Rupert Forest Region (LMH 26, 1993, p. 151), and is

a useful modifier for certain sites in mountainous areas that are dominated by colluvial parent material. "Fragmental" mineral soils have colluvial coarse fragments over 70-80% content. The 70-80% fragmental threshold for mineral soils is the division between skeletal and "fragmental soils" (visual estimate, precise values not required) discussed in the 1994 Vancouver Region Guidebook (LMH 28, p.18, 193, 218).

Minimum Horizontal Inter-Tree Distance (MITD) will be assigned at the Assessment Area (AA) level as per the table below.

MITD (m)	Site Series
1.0	"b" (lithic/fragmental) phases.
1.5	(i) < 20 metres from road centreline; (ii) immediately adjacent to any: (A) stream – riparian area; (B) natural non-productive area; (C) unplantable slash; or (iii) on any: (A) talus site, landslide or avalanche track (B) hygric or wetter site; (C) very harsh site where protected microsites are critical; (D) area where stump avoidance is necessary on a root rot site; (E) area extensively utilized for elk, deer or other wildlife habitat or browse (heavy elk use areas) for survival and to utilize slash; or (F) microsites that are preferable given the tree species or damaging agents, to those sites existing at regular 2.0 meters spacing. (iv) in AAs that are being managed for a target stocking of 1500 sph.
2.0	All other sites.

### Appendix 1.2 – SEDRSS Stocking Standard

		Regeneration Guide									Free Growing Guide	
		Species	Site Occupancy						Regen Delay (max yrs)	MITD	Species	Height (m)
