

Connected Planning in an Adaptive Management Framework

This Forest Operations Plan map identifies the future harvest pattern for 2024 – 2029 as part of a seamlessly integrated Forest Landscape Plan and Forest Operations Plan. The harvest pattern reflects the integrated implementation of the 20 Stewardship Strategies in the Forest Operations Plan and is consistent with the 13 Future Forest Outcomes in the Forest Landscape Plan. This connected approach to planning strengthens public transparency because the 13 Future Forest Outcomes provide the necessary landscape context for each of the individual cutblocks and roads.
